Example README `license` `MIT`

This is a README file created using my readme generator, Good README. It is a command line application that walks the developer through a series of prompts, and then writes the input as markdown to a new file.

Table of Contents

- Installation
- Usage
- Contributing
- Tests
- Questions
- License

Installation

To install Good README, you must first 'git clone' the repo's URL, git@github.com:ShaylaStevenson/good-readme.git. Next you will need to install the required packages by typing 'npm i' into the command line.

Usage

To use the application, open your terminal to the main directory of the good-readme file. Next, type 'node index.js'. You will then be greeted with a series of prompts to answer with details about your project. Once the prompts have completed, you will find your newly created readme file in the main directory.

Contributing

View the Github profiles of contributing members

- For the purpose of demonstration, I will include my own profile link https://github.com/ShaylaStevenson

Tests

There are currently no test examples to include in this section, but the option is available for future development.
